

## CASE STUDY

A world leader in liquid food processing and packaging relies on Trace One Regulatory Compliance to keep pace with ever-evolving industry regulations

# Customer Profile

This global manufacturer produces a range of processing and packaging technologies for use with a broad array of products, from ice cream and cheese to fruit, vegetables, and pet food. Their systems are designed to treat products gently and to minimize the use of raw materials and energy during manufacturing and distribution.

**160+**  
COUNTRIES  
COVERED

**24,000+**  
EMPLOYEES

**PACKAGING**

**SUSTAINABLE  
DEVELOPMENT**

# Situation

## **More than 160 countries, all with unique regulatory requirements**

### **Need to keep pace with changing regulations.**

Food and beverage regulations change all the time. Without a complete, up-to-the-minute understanding of evolving laws and rules in the more than 160 countries it serves, this company is unable to do business.

---

**"Our legal and regulatory teams were spending thousands of hours on painstaking, manual monitoring of laws, which is inefficient and ineffective."**

---

## **Roadblocks to effective collaboration**

### **Difficult to communicate across distributed teams.**

With more than 24,000 employees and numerous business partners, clear communication and collaboration concerning regulatory change is critical. Without a unified, up-to-date platform, communication takes far too long.

---

**"How will regulatory changes in one set of countries affect our suppliers? How will costs change and how might we need to adjust production?"**

---

## **Siloed information**

### **Data required for smart, timely decisions is hard to access.**

Reacting quickly to evolving customer demand is a top priority for competitive businesses. Leadership endeavors to make informed moves across the enterprise. To do so, granular datasets are needed for forecasting and modelling efforts.

---

**"We need a central place where we can store, easily access, and share pertinent regulatory data."**

---

# Solution

With the goal of providing comprehensive, immediate, and reliable regulatory intelligence to food and beverage manufacturers and related entities such as packaging companies, Trace One created a global collaboration platform that takes the stress out of compliance and makes regulatory research and risk assessment easy.

Called Trace One Regulatory Compliance, the solution enables Regulatory, Quality, and R&D teams to acquire the instant insight and actionable data they need to meet ever-changing global food safety standards.

Businesses use Trace One Regulatory Compliance to keep up with legislation across multiple countries and jurisdictions.

---

**"I work in Quality and Safety, and I like Trace One Regulatory Compliance because it enables me to set queries for relevant countries and know immediately if there have been any legislative changes. We use it to stay current on food and beverage regulation and regulation related to packaging, as well. Trace One Regulatory Compliance has a lot of amazing tools that we're still learning about, and their customer support is extremely responsive when we have questions."**

---

# Outcomes

Empowered by Trace One Regulatory Compliance tools, team members have access to 24/7 monitoring of global food news and food legislation updates and can receive personalized, highly focused alerts directly in their inboxes.

## **International regulatory compliance**

Trace One Regulatory Compliance frees legal, regulatory, quality, and safety teams from the arduous, time-intensive task of combing through various international sources, formats, and languages to ascertain changes in the regulatory landscape.

---

**"I find Trace One Regulatory Compliance's translation function extremely useful. Despite the fact that I speak four languages, I need to stay up to speed on numerous markets where I am not fluent and where I need to be able to quickly understand relevant news and share it with colleagues."**

---

## **Accelerated collaboration and knowledge transfer**

With its unified, up-to-date platform, Trace One Regulatory Compliance makes it easy to collaborate across widely distributed teams, share annotations, track changes and comments, and share saved searches.

---

**"We use Trace One Regulatory Compliance's sharing functions for things like substance searches and compliance assessments, and our suppliers and other partners are very happy to have access to the same real-time data that we're looking at."**

---

## **Thorough risk assessment**

Trace One Regulatory Compliance allows companies to track regulatory changes in existing markets while providing their R&D, Production, and Quality teams with guidance on changing formulas, production processes, specifications, and safety requirements.

---

**"Everybody in our business needs to monitor regulations and Trace One Regulatory Compliance is the perfect tool for real-time regulatory monitoring and for concentrating relevant information in one easy-to-access location."**

---
